

Mid Year Internship at WVRC

WVRC, a large emergency, specialty, and referral practice that services the greater Milwaukee and southeastern Wisconsin region, offers a 52 week mid-year emergency-focused internship, starting in February 2018. Our practice includes boarded specialists in critical care, radiology, surgery, internal medicine, neurology, ophthalmology, oncology, anesthesiology, dentistry and cardiology. WVRC also has a strong team of emergency clinicians, and 4 traditional interns who go from the end of June through July 5th. A satellite branch of Marshfield Laboratories is on-site, including a full time clinical pathologist. Our Waukesha hospital is a VECCS level 1 hospital, which is equipped with a complete in house laboratory for point of care/afterhours results, digital radiology, ultrasound, fluoroscopy, MRI and CT. Our team of ER focused interns receive clinically based training in emergency/critical care medicine, emergency surgery, advanced diagnostics and client communication. Interns are involved in morning rounds, journal club, M&M rounds, and weekly didactic rounds. Our interns have primary case responsibility and an experienced ER clinician or criticalist is assigned to each case with them, 24 hours a day and is always onsite. Interns are taught to be proficient at emergency surgeries. Despite the internship being ER focused, we have the flexibility to rotate interns through core specialties; allowing us to provide an individualized experience depending up on the intern's long term career goals. The program can prepare interns for a career in emergency medicine, a strong general practice, residency programs, as well as other specialty internships.

The position includes some shifts at our Racine, WI location, however experienced ER clinicians are always scheduled with them. We are looking for candidates who have a passion for clinically based learning with a large, diverse caseload and who possess strong communication skills. Prior ER exposure is helpful but not required. We encourage graduating students, experienced interns, or DVMs who would like the training an ER internship provides to apply.
